

Press release

(Neubrandenburg, 11 October 2024)

SpeedM® emergency hemostatic dressing receives market approval and sets new standards in pre-hospital patient care.

SpeedM® is an emergency hemostatic dressing that was developed for use with even the most severe traumatic injuries. The high-performance mineral Halloysite, in combination with the patented printing technology offers fast and safe hemostasis on a purely physical basis. The specifically developed properties of the matrix carrier material also decisively support the application of the mineral.

SpeedM® is used by trained first responders.

The CE-market approval of the SpeedM® emergency hemostatic dressing represents a milestone in pre-hospital patient care for severe hemorrhage.

‘As a product for critical patient care, it was our goal from the outset to manufacture SpeedM® in Germany and thus make an important contribution to a secure supply chain here in Europe,’ says Siegfried Kruse, Managing Director of Speed Care Mineral.

About Speed Care Mineral GmbH:

Speed Care Mineral GmbH is a German company with broad expertise in medical technology and the use of minerals in technical and life science applications. The development and manufacture of the products takes place 100% in Germany.
